

"RELIABLE PARTNERS FOR OVER 100 YEARS  
DELIVERING SOLUTIONS WORLDWIDE"

# AQUACULTURE ENGINEERING SERVICES

SITING - MOORING DESIGN AND CALCULATION - NET DESIGN AND LAYOUT VALIDATION  
CAGES ASSEMBLING AND MOORING INSTALLATION

# AQUACULTURE ENGINEERING SERVICES COMPLETE FARM SYSTEMS

Badinotti combines an enviable experience in nets, cages and moorings which few companies can offer today. Use this ability to your advantage and let us bear the burden of complete responsibility for your farm.

We will do everything from the siting to the design, the engineering to the installation, mooring materials to cages, nets to navigation buoys. Take the weight of your shoulders and do what you do best, farm fish, while we do the rest.

## SITING

Sound design relies on high quality data. So when contemplating carrying out your siting why not rely on the same company that will calculate your cages and moorings?

At Badinotti our experienced oceanographers can map your seabed and measure your farms currents reliably, with the most up to date equipment.

# AQUACULTURE ENGINEERING SERVICES MOORING CALCULATION

Our engineers have more than 15 years experience weather conditions. No matter what and where you want to moor your farm, we have probably done something similar before.

To enhance this experience, we use the most up to date specialized simulation packages to ensure the final result is just like you planned it to be.

Make sure your farm is not dangerously under designed or expensively over designed - make it just right - and sleep tight!

## NET DESIGN

At Badinotti we have integrated over 100 years of experience building net cages with the latest simulation technology.

Now, after several hundred net simulations, our highly trained engineers can make your life easier by ensuring your nets behave just as you want them to.

Let us show you how we can design your nets to your precise needs.

Don't lets talk only about resistance, lets talk about the available volume under high currents, and whether your lift up will work with the weight distribution you have on the bottom.

# ASSEMBLING & INSTALLATION

Cage assembling, Cage towing to the Grid mooring system, Mooring installation, Net installation in the cage frame, Sinkers tube assembling and installation are all crucial operations that have to be carried out by qualified staff.

Let Badinotti deal with the HDPE pipes and welding for your cages assembling. We have experience building cages and installing mooring systems all over the world, quickly and efficiently.
