

# SAFETY NET

Security at the workplace and throughout recreation areas has grown significantly in the past years. The laws and the standards recently introduced are more rigorous both in the European Community and in individual Countries.

Badinotti's netting is approved to meet the standards for safety nets in the European community.

**Badinotti protective netting is produced with raschel double front looms. The smooth surface, given the lack of knots, prevents possible injury to people or damage to things on impact.**

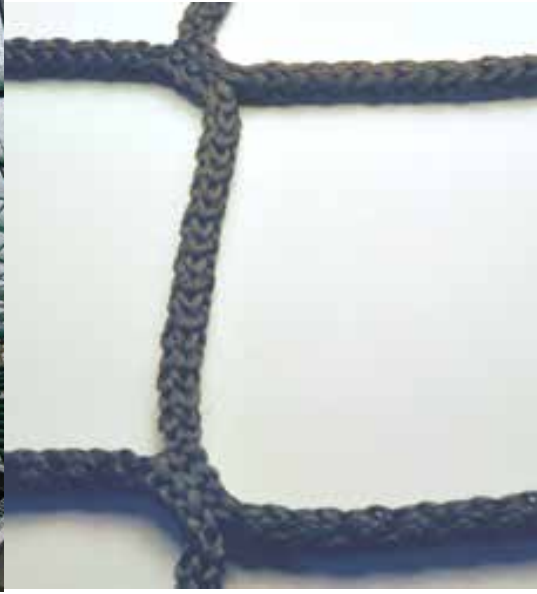

Studies show double face netting with equal resistance to single face netting (used in fish farming nets) offers a greater sense of safety, thanks to the visible constancy of the volume of the net itself.

Safety Net is produced in polypropylene high tenacity and UV stabilized according to the European standard EN 1263-1

Badinotti personnel safety nets for North America are made from knotted and meet OSHA safety standards. The netting is available in diamond configuration in a variety of widths and a diameter of 4.5 mm.

Badinotti produces a range of knotted and knotless netting for this market. Our knotted nets are dyed under high pressure to ensure that the net is dyed throughout the knot. In addition to the traditional choice of Nylon, Badinotti offers Polyester and NEXT™ netting.

Net protection is also used in the sport courts like golf, baseball and can be used to prevent loads from falling from industrial racking or the covering of loads for containers.

**SAFETY NET - STANDARD TYPE**  
Weight 1000MD x1mt: 20,18kg

**SAFETY NET - LIGHT TYPE**  
Weight 1000MD x1mt: 17,11kg

Type	Twine	Fibre	Finish	Diameter (mm)	Breaking load (kg)
Knotless double face netting	2.3	Pp	On request	2.3	64
